

WHAT IS AN

MCCCP

Managed Cybersecurity & Compliance Provider

Compliance & cybersecurity integrated into ONE managed program

These are traditionally managed in separate operational silos causing organizational overlap and other inefficiencies

Continuous cybersecurity & compliance monitoring

Increasingly hostile threat environments and the impact of non-compliance (lost revenue & contracts) requires monitoring to eliminate "flying blind". Without monitoring there is no way to understand your state from moment to moment, day to day, week to week.

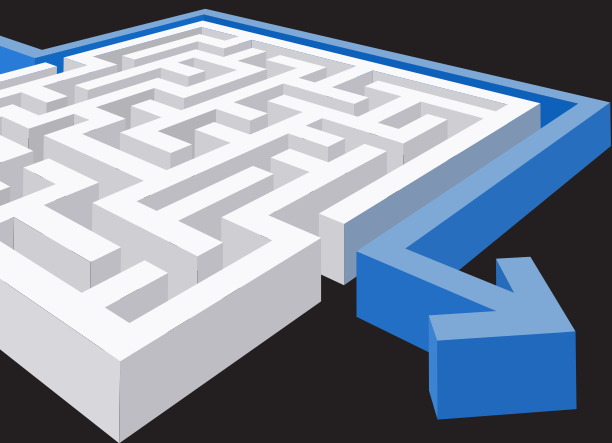

Entire team of cybersecurity & compliance experts for a fraction of the cost

There is a lack of qualified and affordable cybersecurity & compliance professionals, and even if they can be found, the number of personnel required to cover all the key elements of a program is cost prohibitive.

Continuous compliance attestation for auditors, prospects, clients, partners, and supply-chain

Prospects, clients, partners, and the supply chain are increasingly asked for proof of cybersecurity maturity as a condition of doing business with them.

One convenient monthly subscription fee

Managing multiple vendors and projects causes unnecessary management overhead and cost inefficiencies and forces the use of both capex and opex budgets.

MCCCP Core™

Find out how Abacode can help your organization bypass the complexity and exorbitant cost of finding, hiring & retaining a qualified team of cybersecurity professionals while maintaining ever-evolving compliance standards & mandates.
