For DoW contractors to confidently meet and maintain CMMC compliance.

Comprehensive CMMC program with expert guidance and ongoing support.

As a Cyber AB CMMC Registered Practitioner Organization (RPO), we establish your CMMC program to ensure you are ready for an assessment by a Third Party (C3PAO) or Department of War (DoW) Assessor. After you are certified, we help maintain your program for subsequent audits and remain eligible to bid on contracts.

100% US based team	GCC High / ITAR compliant	CyberAB RPO

Abacode's readiness program helps you:

Continue business with DoW/prime vendors

Win new contracts

Meet contractual obligations to protect CUI

Improve security for your organization

How Abacode Ensures Your Readiness.

1 — GRC Assessment

Find out where your organization currently stands and what security, compliance, and privacy controls you require to meet to reach compliance.

2 — Security & Compliance Program Establishment

Get your organization ready for audit and attestation with strategic guidance on implementation of required policies, procedures, and controls.

3 — Audit Liaison

Utilize our certified professionals (RP, CISSP, CompTIA Security+, etc.) to validate evidence and communicate with audit and attestation firms.

4 — Continuous Security & Compliance Program Support

Manage and report on all compliance initiatives, track progress with our tailored compliance web portal for internal use and external auditor access.

Abacode credentials as a CMMC service provider

100% US-based team of W-2 employees

SOC2 SOC 2 Type II certified

ISO 27001 ISO 27001 certified

≡Verify 100% E-verified employees

Abacode is an RPO, historically has more RP's than any other readiness provider

SRM Shared Responsibility Matrix (available upon request)

Established relationships with top C3PAO's

GCC High / ITAR compliant SOC service architecture

The purpose of CMMC

Department of War (DoW) contractors are crucial to national cybersecurity, tasked with protecting Controlled Unclassified Information (CUI). The Cybersecurity Maturity Model Certification (CMMC) ensures that DoW contractors and sub-contractors meet required cybersecurity standards, enhancing supply chain security and overall national defense.

CMMC and NIST

CMMC certifies contractor compliance with NIST Cybersecurity. Due to low compliance rates and rising nation-state cyber threats, a structured assessment like CMMC is necessary. CMMC builds on the foundations of NIST SP 800-171 and SP 800-172 to enhance cybersecurity across the Defense Industrial Base (DIB).

"We engaged Abacode about a year ago to assist with a vulnerability assessment and had a great experience working with them. Shortly thereafter, we realized we had revenue at risk due to the upcoming CMMC requirements, so they were our first call. Their team took care of everything from implementation of 24/7 Security Operations Center Monitoring, to identifying the CMMC 2.0 gaps and risks we had and are now helping us implement the controls and policies we need to retain and grow business with our prime contractors in aerospace and the DoW. Abacode has helped our business mature and grow, and that is why we will continue to rely on them for our cybersecurity and compliance needs."

— Nate Valentin / Director, Digital and Innovation / ADAMS
